Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

4)  Claim(s) 1-26 and 31-34 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration.  5)  Claim(s) 4.6-9 and 33 is/are allowed. 6)  Claim(s) 1-3.5.10-22.24-26.31.32 and 34 is/are rejected. 7)  Claim(s) 23 is/are objected to. 8)  Claim(s) are subject to restriction and/or election requirement.  Application Papers  9)  The specification is objected to by the Examiner. 10)  The drawing(s) filed on is/ are: a)  accepted or b)  objected to by the Examiner.   'Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).   Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11)  The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.  Priority under 35 U.S.C. § 119  12)  Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).   a)  All  b)  Some * c)  None of:   1.  Certified copies of the priority documents have been received.   2.  Certified copies of the priority documents have been received in Application No   3.  Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  *See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

#### Respond to Arguments

1. Applicant's arguments with respect to claim 1-26 have been considered but are moot in view of the new ground(s) of rejection.

### Claim Rejection - 35 USC § 103

- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

10/796,511

Art Unit: 2616

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or

Page 3

nonobviousness.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as

set forth in section 102 of this title, if the differences between the subject matter sought to be

patented and the prior art are such that the subject matter as a whole would have been obvious at

the time the invention was made to a person having ordinary skill in the art to which said subject

matter pertains. Patentability shall not be negatived by the manner in which the invention was

made.

5. Claims 1, 3, 10, 13 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Witchey, U.S. Patent No 5563885 in view of Acharya et al, U.S. Patent No 6502062.

Regarding Claim 1, Witchey discloses that a method of scheduling the handling of

communication channels by a processor assigned to handle a plurality of channels (see

10/796,511 Art Unit: 2616

requirements.

Abstract Line 1-4), comprising: determining for each channel of a plurality of assigned channels of the processor, handled by the processor, a target time by which time it should receive processing (see Abstract Line 4-14); selecting one or more of the assigned channels whose data is to be handled next, based on the target times of the channels (see Figure 5A-B, Column 8 Line 43-67). However, Witchey does not disclose that the method, wherein when more than one channel is selected, choosing for handling before other channels, at least one of the selected channels based on a consideration directed at minimizing the average processing time of the channels; wherein choosing at least one of the selected channels comprises choosing at least one channel of a same type as a channel currently by the processor. Acharya et al from the same field of endeavor disclose that the method, wherein when more than one channel is selected, choosing for handling before other channels, at least one of the selected channels based on a consideration directed at minimizing the average processing time of the channels (see Abstract Line 1-11, Figure 1, Column 3 Line 11-20); wherein choosing at least one of the selected channels comprises choosing at least one channel of a same type as a channel currently by the processor (see Figure 1 Element 42 i.e. all the channels are the same type, namely data channels, thus regardless which channel is chosen and how, they are the same type). At the time of the invention, it would have been obvious to a person ordinary skill in the art to implement the minimum flow algorithm from Acharya to Witchey's scheduling system. The rationale would have been that by doing so, data flow among multiple channels can be less restricted and further lower the system buffering

10/796,511

Art Unit: 2616

Regarding Claim 3, Acharya et al further disclose that the method comprising: determining an

average duration of the handling of the channel (see Column 3 Line 11-20). At the time of

the invention, it would have been obvious to a person ordinary skill in the art to determine an

average duration of the handling of the channel. The rationale would have been that extra

information regarding the channels can help the scheduling processor further improve the

performance.

Regarding Claim 10, Acharya et al further disclose that the method, wherein when more than

one channel is selected, choosing for handling before other channels, at least one of the

selected channels based on a consideration directed at minimizing the average processing

time of the channels (see Abstract Line 1-11, Figure 1, Column 3 Line 11-20). At the time of

the invention, it would have been obvious to a person ordinary skill in the art to choose for

handling before other channels, at least one of the selected channels based on a consideration

directed at minimizing the average processing time of the channels. The rationale would have

been that the system can perform more efficiently with faster speed.

Regarding Claim 13, Witchey further discloses that the method comprising: selecting a

plurality of channels having different target times (see Figure 5A-B, Column 8 Line 43-67).

Regarding Claim 14, Acharya et al further disclose that the method comprising: choosing

based on the protocol governing the handling of the data of the channels (see Column 3 Line

10/796,511

governing data traffic.

Art Unit: 2616

11-34). At the time of the invention, it would have been obvious to a person ordinary skill in the art to choose channels based on the protocol governing the handling of the data of the channels. The rationale would have been that the system can perform more efficiently with extra rule

Regarding Claim 34, Witchey discloses that a method of scheduling the handling of communication channels by a processor assigned to handle a plurality of channels (see Abstract Line 1-4, Column 2 Line 50-55) comprising: determining for each channel, handled by the processor, a target time by which time it should receive processing (see Abstract Line 4-14, Column 2 Line 56-63); selecting, based on the target times of the channels, a plurality of assigned channels, having two or more different target times, from which a next handled channel is to be selected (see Figure 5A-B, Column 8 Line 43-67); choosing for processing one of the selected channels at least partially based on considerations not related to the target times of the channels; and scheduling the processor to handle the chosen channel (see Column 9 Line 3-12). However, Witchey does not disclose that the method, wherein choosing at least one of the selected channels comprises choosing at least one channel of a same type as a channel currently by the processor. Acharya et al from the same field of endeavor disclose that wherein choosing at least one of the selected channels comprises choosing at least one channel of a same type as a channel currently by the processor (see Figure 1 Element 42 i.e. all the channels are the same type, namely data channels, thus regardless which channel is chosen and how, they are the same type). At the time of the invention, it would have been obvious to a person ordinary skill in the art to implement the minimum flow algorithm

10/796,511

Art Unit: 2616

from Acharya to Witchey's scheduling system. The rationale would have been that by doing so,

data flow among multiple channels can be less restricted and further lower the system buffering

requirements.

6. Claims 2, 5, 11, 12 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Witchey, U.S. Patent No 5563885 and Acharya et al, U.S. Patent No 6502062 as applied to claim

1 above, and further in view of Netzer et al U.S. Publication No 20030014484.

Regarding Claim 2, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method, wherein determining a target time for each channel comprises determining a

time by which the channel needs to receive a handling session in order to avoid starvation.

Netzer et al from the same field of endeavor teach that the method, wherein determining a

target time for each channel comprises determining a time by which the channel needs to

receive a handling session in order to avoid starvation (see Paragraph [0037]). At the time of

the invention, it would have been obvious to a person ordinary skill in the art to determine a

target time by which the channel needs to receive a handling session in order to avoid starvation.

The rationale would have been that the system can perform more efficiently without lack of

resource.

Regarding Claim 5, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method, wherein selecting based on the target times comprises selecting the channels

10/796,511

Art Unit: 2616

having a shortest duration until their target times. Netzer et al from the same field of

endeavor teach that the method, wherein selecting based on the target times comprises

selecting the channels having a shortest duration until their target times (see Paragraph

[0037]). At the time of the invention, it would have been obvious to a person ordinary skill in

the art to select channels having a shortest duration until their target time. The rationale would

have been that the system can perform more efficiently with faster speed.

Regarding Claim 11, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method comprising: choosing from the selected channels that have an equal quality of

service rating. Netzer et al from the same field of endeavor teach that the method comprising:

choosing from the selected channels that have an equal quality of service rating (see

Paragraph [0092]). At the time of the invention, it would have been obvious to a person ordinary

skill in the art to select channels having an equal quality of service rating. The rationale would

have been that the system can perform more efficiently with more quality ensurance.

Regarding Claim 12, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method comprising; choosing for handling all the selected channels before handling

other channels. Netzer et al from the same field of endeavor teach that the method

comprising: choosing for handling all the selected channels before handling other channels

(see Paragraph [0016] [0093] [0099] e.g. all the selected channels has unlimited processing

session, a channel is selected to have limited procession session is processed in the next cycle

10/796,511

Art Unit: 2616

after all the selected channels have been handled). At the time of the invention, it would have

been obvious to a person ordinary skill in the art to choose for handling all the selected channels

before handling other channels. The rationale would have been that the system can perform

more efficiently with priority control.

Regarding Claim 17, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method/apparatus comprising: choosing based on a consideration that minimizes time

spent on memory transfers. Netzer et al from the same field of endeavor teach that the

method/apparatus comprising: choosing based on a consideration that minimizes time

spent on memory transfers (see Paragraph [0062-63]). At the time of the invention, it would

have been obvious to a person ordinary skill in the art to choose channels based on a

consideration that minimizes time spent on memory transfers. The rationale would have been

that the system can perform more efficiently with faster speed.

7. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable Witchey, U.S. Patent

No 5563885 and Acharya et al, U.S. Patent No 6502062 as applied to claim 1 above, and further

in view of Chin et al U.S. Patent No 6490298.

Regarding Claim 15, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method comprising choosing based on the transmission rates of the channels. Chin et al

from the same field of endeavor disclose that the method comprising choosing based on the

Page 10

Application/Control Number:

10/796,511

Art Unit: 2616

transmission rates of the channels (see Abstract, Column 1 Line 57-59). At the time of the

invention, it would have been obvious to a person ordinary skill in the art to implement the

functionality of assigning incoming sources/channels to a scheduler according to the

transmission rate of each source/channel from Chin et al to the scheduling system and method of

Withcey. The rationale would have been that it is desired for a scheduling system and method to

be flexible in order to handle the multiple source/channels when they change their bit rate

frequently and on-the-fly.

8. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable Witchey, U.S. Patent

No 5563885 and Acharya et al, U.S. Patent No 6502062 as applied to claim 1 above, and further

in view of Cheng et al U.S. Publication No 20050043045.

Regarding Claim 16, Witchey and Acharya et al disclose all the limitations in claim 1 except that

the method comprising choosing based on the types of the channels. Cheng et al from the

same field of endeavor disclose that the method comprising choosing based on the types of

the channels (see Abstract, Paragraph [0027]). At the time of the invention, it would have been

obvious to a person ordinary skill in the art to implement the functionality of effecting time

controlled time scheduling from Cheng et al to the scheduling system and method of Withcey.

The rationale would have been that it is desired to schedule the channels of the same type in

order to reduce the amount of interference between channels when they have the same target

time.

10/796,511 Art Unit: 2616

9. Claims 18, 19, 20, 26 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Witchey, U.S. Patent No 5563885.

Regarding Claim 18, Witchey discloses that a method of scheduling the handling of communication channels by a processor assigned to handle a plurality of channels (see Abstract Line 1-4, Column 2 Line 50-55) comprising: determining for each channel, handled by the processor, a target time by which time it should receive processing (see Abstract Line 4-14, Column 2 Line 56-63); selecting, based on the target times of the channels, a plurality of assigned channels, having two or more different target times, from which a next handled channel is to be selected (see Figure 5A-B, Column 8 Line 43-67); choosing for processing one of the selected channels at least partially based on considerations not related to the target times of the channels; and scheduling the processor to handle the chosen channel (see Column 9 Line 3-12). However, Witchey does not specifically disclose that the method, wherein choosing one of the selected channels comprises choosing a channel having a farther target time than at least one channel that was not chosen. Since Witchey discloses that a channel is selected from two or more channels with different target times, a selected channel must have a target time that is either farther or closer than at least one channel that was not selected i.e. consider the exemplary scenario: two channels, A and B, each has the target time of 5 and 10 respectively. At the time of the invention, it would have been obvious to a person ordinary skill in the art to realize that if one of a plurality of channels, which have two ore more different target time, is chosen the selected channel must have a target time that is either farther or closer than at least one channel that was not selected. The rationale would have been that

10/796,511

Art Unit: 2616

extra information regarding the channels can help the scheduling processor further improve the

performance.

Regarding Claim 19, Witchey discloses all the limitations in claim 31 except that the method

wherein choosing one of the selected channels comprises choosing a channel having a

farther target time than at least one channel that was not chosen. However, since Witchey

discloses that a channel is selected from two or more channels with different target times, a

selected channel must have a target time that is either farther or closer than at least one channel

that was not selected i.e. consider the exemplary scenario: two channels, A and B, each has the

target time of 5 and 10 respectively. At the time of the invention, it would have been obvious to

a person ordinary skill in the art to realize that if one of a plurality of channels, which have two

ore more different target time, is chosen the selected channel must have a target time that is

either farther or closer than at least one channel that was not selected. The rationale would have

been that extra information regarding the channels can help the scheduling processor further

improve the performance.

Regarding Claim 20, Witchey discloses all the limitations in claim 18 except that the method

wherein choosing one of the selected channels comprises choosing a channel having a

farther target time than at least one channel that was not chosen. However, since Witchey

discloses that a channel is selected from two or more channels with different target times, a

selected channel must have a target time that is either farther or closer than at least one channel

that was not selected i.e. consider the exemplary scenario: two channels, A and B, each has the

10/796,511

Art Unit: 2616

target time of 5 and 10 respectively. At the time of the invention, it would have been obvious to a person ordinary skill in the art to realize that if one of a plurality of channels, which have two ore more different target time, is chosen the selected channel must have a target time that is either farther or closer than at least one channel that was not selected. The rationale would have been that extra information regarding the channels can help the scheduling processor further improve the performance.

Regarding Claim 26, Witchey further discloses that the method comprising: choosing a plurality of channels based on considerations not related to timing issues and choosing therefrom a single channel based on the target times (see Column 9 Line 3-12).

Regarding Claim 31, Witchey discloses that a method of scheduling the handling of communication channels by a processor assigned to handle a plurality of channels (see Abstract Line 1-4, Column 2 Line 50-55) comprising: determining for each channel, handled by the processor, a target time by which time it should receive processing (see Abstract Line 4-14, Column 2 Line 56-63); selecting, based on the target times of the channels, a plurality of assigned channels, having two or more different target times, from which a next handled channel is to be selected (see Figure 5A-B, Column 8 Line 43-67); choosing for processing one of the selected channels at least partially based on considerations not related to the target times of the channels; and scheduling the processor to handle the chosen channel (see Column 9 Line 3-12). However, Witchey does not specifically disclose that the method, wherein choosing one of the selected channels comprises choosing a channel having a closer

target time than at least one channel that was not chosen. Since Witchey discloses that a

Page 14

channel is selected from two or more channels with different target times, a selected channel

must have a target time that is either farther or closer than at least one channel that was not

selected i.e. consider the exemplary scenario: two channels, A and B, each has the target time of

5 and 10 respectively. At the time of the invention, it would have been obvious to a person

ordinary skill in the art to realize that if one of a plurality of channels, which have two ore more

different target time, is chosen the selected channel must have a target time that is either farther

or closer than at least one channel that was not selected. The rationale would have been that

extra information regarding the channels can help the scheduling processor further improve the

performance.

9. Claims 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Witchey, U.S. Patent No 5563885 as applied to claim 18 above, and further in view of Netzer et

al U.S. Publication No 20030014484.

Regarding Claim 21, Witchey discloses all the limitations in claim 18 except that the method

comprising: selecting based on processing efficiency considerations. Netzer et al from the

same field of endeavor disclose that the method comprising: selecting based on processing

efficiency considerations (see Paragraph [0075] [0078]). At the time of the invention, it would

have been obvious to a person ordinary skill in the art to choose channels based on processing

efficiency considerations. The rationale would have been that the system can perform more

efficiently with faster speed.

10/796,511

Art Unit: 2616

Regarding Claim 22, Witchey discloses all the limitations in claim 18 except that the method

comprising: determining a time by which the channel needs to receive a handling session in

order to avoid starvation. Netzer et al from the same field of endeavor teach that the method,

wherein determining a target time for each channel comprises determining a time by which

the channel needs to receive a handling session in order to avoid starvation (see Paragraph

[0037]). At the time of the invention, it would have been obvious to a person ordinary skill in

the art to determine a target time by which the channel needs to receive a handling session in

order to avoid starvation. The rationale would have been that the system can perform more

efficiently without lack of resource.

10. Claims 24 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Witchey, U.S. Patent No 5563885 as applied to claims 18 and 31 above, and further in view of

Dennis U.S. Patent No 6195699.

Regarding Claim 24, Witchey discloses all the limitations in claim 18 except that the method

comprising: choosing a channel that requires processing by a software module already in a

memory of the processor. Dennis from the same field of endeavor discloses that the method

comprising: choosing at least one channel that requires processing by a software module

already in a memory of the processor (see Column 3 Line 42-47, Column 4 Line 40-44,

Column 8 Line 24-41). At the time of the invention, it would have been obvious to a person

10/796,511

Art Unit: 2616

ordinary skill in the art to implement the real time scheduling scheme from Dennis to the

scheduling system and method of Withcey. The rationale would have been that the real time

scheduling schemes reduce the scheduling table storing in the processor and further lower the

system buffering requirements.

Regarding Claim 32, Witchey discloses all the limitations in claim 31 except that the method

comprising: choosing a channel that requires processing by a software module already in a

memory of the processor. Dennis from the same field of endeavor discloses that the method

comprising: choosing at least one channel that requires processing by a software module

already in a memory of the processor (see Column 3 Line 42-47, Column 4 Line 40-44,

Column 8 Line 24-41). At the time of the invention, it would have been obvious to a person

ordinary skill in the art to implement the real time scheduling scheme from Dennis to the

scheduling system and method of Withcey. The rationale would have been that the real time

scheduling schemes reduce the scheduling table storing in the processor and further lower the

system buffering requirements.

11. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Witchey, U.S.

Patent No 5563885 as applied to claim 18 above, and further in view of Acharya et al, U.S.

Patent No 6502062.

Regarding Claim 25, Witchey discloses all the limitations in claim 18 except that the method,

wherein choosing at least one of the selected channels comprises choosing at least one

Page 17

Application/Control Number:

10/796,511

Art Unit: 2616

channel of a same type as a channel currently by the processor. Acharya et al from the same

field of endeavor disclose that the method, wherein choosing at least one of the selected

channels comprises choosing at least one channel of a same type as a channel currently by

the processor (see Figure 1 Element 42 i.e. all the channels are the same type, namely data

channels, thus regardless which channel is chosen and how, they are the same type). At the time

of the invention, it would have been obvious to a person ordinary skill in the art to choose at least

one of the selected channels comprises choosing at least one channel of a same type as a channel

currently by the processor. The rationale would have been that the system can perform more

efficiently with less system resource wasted.

# Allowable Subject Matter

12. Claim 2 3 is objected to as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base claim and any

intervening claims.

13. The following is a statement of reasons for the indication of allowable subject matter:

For claims 4, 6-9, 23 and 33 prior art fails to show alone or in combination that the specific

limitations of assigning channels accordingly to be scheduled by the scheduling processor.

10/796,511

Art Unit: 2616

Conclusion

Page 18

14. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. Referring to the PTO Form 892, references are cited to show similar scheduling

system and method to handle multiple channels or source.

15. Examiner's Note: Examiner has cited particular columns and line numbers in the

references applied to the claims above for the convenience of the applicant. Although the

specified citations are representative of the teachings of the art and are applied to specific

limitations within the individual claim, other passages and figures may apply as well. It is

respectfully requested from the applicant in preparing responses, to fully consider the references

in entirety as potentially teaching all or part of the claimed invention, as well as the context of

the passage as taught by the prior art or disclosed by the Examiner.

In the case of amending the claimed invention, Applicant is respectfully requested to indicate the

portion(s) of the specification which dictate(s) the structure relied on for proper interpretation

and also to verify and ascertain the metes and bounds of the claimed invention.

16. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Wei-po Kao whose telephone number is (571)270-3128. The

examiner can normally be reached on Monday through Friday, 8:30AM to 5:00PM.

10/796,511 Art Unit: 2616 Page 19

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Ricky Ngo can be reached on (571)272-3139. The fax phone number for the organization where

this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be

obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
